

Module Drupal de pagination

Le 26 mai 2008 à 08:10.

Un module de pagination. J'avais fauché les sources je ne sais plus où et les avait modifiées.

```
<?php [1]
/**
 * filter to set up page numbers for multiple page articles,
 * based on suggestions by Prometheus6 on http://drupal.org/node/23362#comment-
40580
 * @file pagination.module
 * @author Kitt Hodsden http://kitt.hodsden.com/
 * @license Creative Commons BY-NC-SA, http://creativecommons.org/licenses/by-nc-
sa/2.0/
 * @license GNU GPL v2
 */

/**
 * help hook
 */
function [2] pagination_help($section) {
  switch [3] ($section) {
    case [4] 'admin/modules#description':
      return [5] t("Handles splitting long nodes into several pages, allowing for full
node view also.");
  }
}

/**
 * settings hook
 */
function [2] pagination_settings() {

  // set up the params via pageNo URL variable or URL directly
  $o = form_textfield(t('Text before page links'), 'pagination_pre',
variable_get('pagination_pre', 'Go to page: '), 30, 255, t('Text displayed before the
pagination links'));
  $o .= form_textfield(t('Previous page'), 'pagination_prev',
variable_get('pagination_prev', 'previous'), 30, 255, t('Previous page link text'));
  $o .= form_textfield(t('Next page'), 'pagination_next',
variable_get('pagination_next', 'next'), 30, 255, t('Next page link text'));
  $o .= form_textfield(t('Single page text'), 'pagination_single',
variable_get('pagination_single', 'single page'), 30, 255, t('Single page link
text'));
  $o .= form_textfield(t('Pagination break pattern'), 'pagination_break',
variable_get('pagination_break', '<!--pagebreak-->'), 30, 255, t('Pattern to break
pages on, defaults to &lt;!--pagebreak--&gt;, which requires "Full HTML" input
filter'));

  return [5] $o;
}

/**
 * nodeapi hook
 */
function [2] pagination_nodeapi(&$node, $op, $teaser = NULL [6], $page = NULL [6]) {

  switch [3] ($op) {

    case [4] 'alter':
      /*
       * see if the page is being printed, some themes use &print in URLs for printing,
       * the print.module uses /print at the end of the node url (node/#/print), use
```

```

substr
  * in case PCRE not available (though, taxonomy uses preg_match, so should be okay)
  */
$not_printing = true [7];
